## **ISPA beefs up local peering throughput capacity**

The Internet Service Providers Association (ISPA) has improved the plumbing used to exchange local network traffic to make for a faster, more efficient SA 'Net. The commissioning of a Cisco Catalyst 2924 switch with 24 10/100 ports and a three-gigabyte backplane at the ISPA Johannesburg Internet Exchange (JINX) means better throughput for traffic between the networks of local Internet access companies, and faster Web access to local sites for SA users. The Johannesburg peering point connects The Internet Solution, UUNet Internet Africa, M-Web, Global Internet Access, IBM, CiTEC and the universities network, Uninet-ZA. Cape Town connects The Internet Solution, UUNET Internet Africa and the Uninet. The total capacity of the ISPA's two peering points currently stands at close to 16 Mbps.

Today i switched off a hidden legend in [#SouthAfrica](#). In service non-stop until yest., it's had 100% uptime for 8years, as one of two [#peering](#) switches donated by [@Cisco](#) to the [#JINX](#). [#tearful](#)  
[#unsungheroes](#)

```
sw02-jinx uptime is 8 years, 7 hours, 5 minutes
System returned to ROM by power-on
System restarted at 20:19:29 SAST Wed Nov 3 2010
System image file is "bootflash:cat4500e-entservicesk9-mz.122-46.SG.bin"
```

# Server passes test

THE Internet Service Providers' Association announced this week that the most critical component of the South African Internet backbone, the Johannesburg Internet Exchange, is Y2K compliant.

The Johannesburg Internet Exchange is a service offered by the association to its members – which allows service providers to exchange local Internet traffic.

The equipment has been certified as Y2K compliant by Cisco's international Y2K awareness programme. –
